

Comsec III Wire Tap Detector C3I-II

The COMSEC C3I-II is the only security device that can detect legal and illegal wiretapping anywhere on the local telephone line including at the Telephone Company's Central Exchange.

Once connected the device continuously detects, reacts and displays an electrical signature pattern of the slightest electrical changes in telephone line impedance which result from signaling and switching equipment, telephone lines and wiretapping equipment connecting and disconnecting on your telephone line.

Remote extension drawn loops are created very easily with REMOBS and similar slave units attached to your telephone line.

The device detects remote extension drawn loop wiretapping / electronic surveillance connecting and disconnecting from your telephone line.

Continuously protects your Telephone, Fax and Computer Data communications "to a degree never before possible."

The COMSEC C3I-II TM is the first and only telephone line security device that can detect electronically isolated remote extension drawn loops; the most sophisticated, threatening and common type of electronic surveillance that other security devices cannot detect. Detect eavesdropping/wiretapping that previously had been undetectable.

Detect Computer Hackers, Government Agencies, Telephone Company Employees, etc. manipulating the Telephone Company's Central Exchange switching equipment to intercept your Telephones, Fax and Computer dial-up communications.

This unique device is most effective at detecting wiretaps / eavesdropping at the beginning and ending of a telephone call. At the beginning of a telephone call when someone is calling you watch for a remote extension drawn loop wiretap to seize the line between the cadence ringing, usually between the first and third ring creating a connection reaction.

At the conclusion of any telephone call by observing the C3I and counting / timing the number of disconnection reactions on the telephone line the COMSEC C3I-II can detect legal and illegal wiretapping on your telephone line by establishing either a normal signature pattern or an abnormal signature pattern resulting from additional telephone lines / wiretapping equipment disconnecting from your telephone line.

It continuously detects legal and illegal remote extension drawn loop wiretaps connecting and disconnecting anywhere on your local telephone line, including at the Telephone Company's Central Exchange.

Specifications:

FCC Approved

Single or 2 line use

Continuous monitoring on phone line

Hard shell black casing

Telephone line powered, no batteries needed

Includes:

Wire tap detector with LED

Phone line cord to attach detector to phone

Complete instructions

Size: 4 1/2 x 1 7/8 x 1
