DIY Smart Home Kit (Item: SH1270)

With its starter devices, low cost and easy installation the SH1270 DIY Smart Home Kit is the perfect intro into the Smart Home world. This starter kit comes complete with an IP Camera, RGB Smart Bulb, Smart Socket, PR Detector and Smart Home Door Sensor. Smart home devices are an easy way to protect your home and add convenience to your life. Cut out the monthly alarm monitoring fees and self-monitor with the app notifications from our DIY Smart Home kit.

Features:

Protect Your Home and Add Convenience To Your Life

The powerful hub of the Smart Home Kit is the HD Pan, Tilt, Zoom (PTZ) Camera. It is equipped with night vision that can see up to 30 feet in the dark, two way talk audio, and doubles as an RF and Wi-Fi hub. Record video via a memory card plus review recorded in the app. The Wi-Fi hub makes it easy to connect additional smart home devices and make this Smart Home Kit even more complete. Along with the Smart Home PTZ Camera the kit includes:

- 2 door/window sensors capable of sending notifications to your phone just like that costly alarm monitoring company
- a PIR sensor to detect intruders
- a smart plug that allows you to control a connected device such a TV or lamp from the app
- a remote controlled light bulb that can turn to over 16 million colors!

The DIY Smart Home Kit is 6 smart home devices in one box! Share the app with up to 4 people in your household.

This kit also works with our Smart home doorbell SH1000 in the same convenient app.
