

Audio Security

iProtect Summit- Multi Phone Safe (Item: NG4200)

Protect important or sensitive conversations from eavesdropping cell phones! Obviously, mobile phones have an infinite number of benefits for communication and business; however, they also create certain threats of private or trade secrets information being leaked. One of the potential leakage channels is the phone's microphone as it can pick up conversations without anyone's knowledge. The SUMMIT-PHONE SAFE has been developed by iProtect information security professionals to protect against this exact type of threat.

Features:

Vulnerabilities of modern phones

- The phone can be intentionally, or covertly, 'off-hook' during important conversations and negotiations
- Voice recording software can intentionally, or secretly, run on the smartphone
- Listening software can run in a 'stealth' mode
- Spyware can be installed on the smartphone without the owner's knowledge, allowing attackers to activate covert eavesdropping around the phone.
- Smartphone apps which have access to the phone's microphone can be used for eavesdropping in cases of them having been hacked (usually messengers or social network apps) There are known cases of transmission of such software by exploiting the vulnerabilities of some messengers.

Features and advantages

- Blocks the microphone of the phone with the help of non-filterable ultrasonic interference
- Efficiently prevents surround recording app from capturing conversations and sounds
- The frequency of interference has been optimally selected for the best performance and defeats all existing models of smartphones.
- Made attractive with natural wood stand.

Audio Security

- The phone stays online and available for incoming calls
- No illegal radio jamming
- Can be powered by the external USB, or from the built-in rechargeable battery
- Has 2 sensors, increasing the battery's resource: the device starts producing interference when a phone is inserted (IN USE sensor) and a conversation is present (ACTIVITY sensor)
- Is compatible with all types of phones
- **Accommodates from 1 to 4 phones.**
- Use in board rooms, R&D labs anywhere you need to secure conversations and meetings.

NG4200 Multi Phone Safe Product Overview

Tech Specs:

- Type of interference: Ultra sound, inaudible frequency
- Battery resource: >10 hours Recharging time: 12 hours
- Connector: USB Type C
- Capacity: Up to 4 phones
- Compatible phones Height up to 7inchs
- Power of noise <2 W in the active area
- Power Built-in rechargeable battery and USB 5V
- Indicators lights
- Indicators: BATT, ACTIVE, IN USE
- Sensors: IN USE , ACTIVE
- Current consumption: 500 mA (noise mode) 6 mA (stand-by mode)
- Battery: Li-Ion, 3.7 V, 6800 mAh

Includes:

- USB Type C Cable and Manual
