3. Application

A. Camera connects to a portable DVR:

1. Install the device same as Installation 1.
2. Insert AV jack into A/V IN DC 5V OUT socket of the portable DVR device. Switch to NTSC or PAL system.
3. Press portable DVR POWER-ON button for 3 seconds and release the button. Note that HOLD button should switch to off position when POWER button is pressed.
4. A green light will turn on to show that DVR device is turn-on properly.
5. Press REC button to start recording.
6. Captured images are shown on LCD display.
7. Audio and video signals are collected and recorded on DVR.

B. Camera connects to external display device:

1. Install the device same as Installation 2.
2. Switch to NTSC or PAL system. Slide the back cover of battery holder opened. Insert the battery PP3 (9V) in proper direction. Switch to ON indication.
3. The yellow and white color cable heads are to connect with the external display device (TV or LCD monitor).
4. Connects camera to the battery holder.
5. Captured images are shown on the connected external display device.
6. Noted that external display device is required to connect recording device in order to record motion picture.
